

Student Assistant – HiWi Job

Maintenance of a Desktop Graphical Application

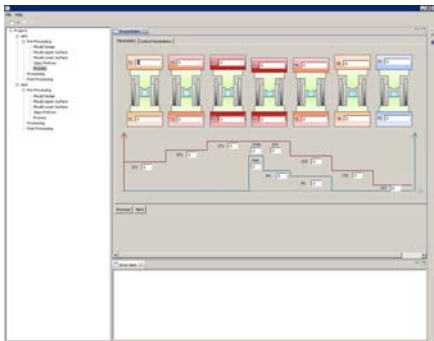

You possess

- Interest on application oriented software development
- Experience in GUI programming, ideally in Java Eclipse
- Strong knowledge in programming and design
- Ability to adapt to and maintain existing design and implementation
- Ambitions to produce good-quality code
- You have the team spirit, and eager to work in team

We offer

- Clear Tasks with strong application orientation
- Teamwork with experienced personnel from the industry
- Flexible work time and freedom for innovation
- Good hardware and software infrastructure

In Fraunhofer IPT, a process simulation has been developed for the precision glass molding technology, which is suitable for the manufacturing of innovative glass optics. For commercial use, a GUI mediator application between the end-user and the simulation core has been developed. This application is implemented in Java for portability, and in Client/Server approach using Eclipse Plug-ins, RCP and other technologies. According to customer requirements, new features should be constantly integrated as maintenance of the software. You are expected to work along with other colleagues as a team and devote your professional skills and responsibility in the implementation and testing phase.
